- Your **CMF® Next SX** will be supplied to you complete with accessories and an operating manual.

- It's easy to add extra days of hire or ask for the equipment to be collected, just give us a call!

CMF® Next SX can provide fundamental support in bone regeneration, delayed fracture healing and regenerative medicine in general. **It reduces recovery times by at least 50% after injuries and operations** by treating inflammation and any bacterial infections simultaneously. The quality of the resulting tissue repair is much higher than with normal physiological healing.

The device's action in combating chronic whole-body inflammation and oxidative stress is particularly significant. Such conditions are often associated with dietary imbalances, being overweight or unhealthy lifestyles that make individuals susceptible to serious diseases.

Such generalised chronic imbalances are all the more dangerous because they often come with few symptoms or none at all. Correcting them can really help prevent serious acute and chronic diseases.

Another advantage of this technology is its ability to **significantly reduce pain and swelling** from the very first sessions.
